

Patients with COPD

Invitation to discuss your views on lung cancer screening

The Wessex Cancer Alliance and Cancer Research UK are developing some guidance to help nurses detect early signs of lung cancer in patients with COPD (Chronic Obstructive Pulmonary Disease).

We want to speak to a few patients with COPD who have not yet been tested for lung cancer about their views on lung cancer screening and information.

We would like to invite you to have an informal discussion, which will last about 30 minutes. This can be over the phone or face-to-face. Travel and parking will be reimbursed.

To take part or for more information contact Katie Greenfield
